

Priyansh Kashyap

Experienced Game Developer

Personal Statement

To pursue the craft of game development as a long-term challenge—engineering systems, worlds, and experiences that meet the highest standards of creativity and technical precision. My goal is to continuously push my limits, master complex problems, and build games that stand out through depth, polish, and emotional impact. I aim to grow as a disciplined programmer and a thoughtful creator, dedicated to producing work that resonates with players worldwide.

Project Highlights

[\[Store\]](#) [\[Post\]](#) **Word Boggle**

Oct 2025 - Nov 2025

- A fast, grid-based word-finding game where the board is procedurally generated with constraints to ensure valid paths and minimal directional noise.
- The project runs with lightweight data structures for rapid iteration, making it easy to extend with scoring rules, time attack modes, or content scaling.
- **Tech Stack: Unity, C#, Git, Affinity**

[\[Github\]](#) **Entity Component System**

June 2025 - July 2025

- The main purpose of making this project, was to get to know the working of an ECS and achieve a more broader look upon data-oriented design.
- Battle tested with traditional OOPS approach and provides 10% more fps in games.
- **Tech Stack: C++, Raylib, STL, Git**

[\[Github\]](#) [\[Post\]](#) **Escape Room in VR**

Oct 2023 - Nov 2023

- This is a demo project where we have to solve three puzzles under 5 minutes. I have worked Unity Game Engine, C# programming language in its development.
- **Tech Stack: Unity, C#, Git, Affinity**
